ELSEVIER

Comput. Methods Appl. Mech. Engrg. 130 (1996) 403–405

Computer methods in applied mechanics and engineering

Contents Volume 130

Volume 130, Nos. 1–2, March 1996

A unified contact algorithm based on the territory concept
Z.-H. Zhong and L. Nilsson 1

Estimated error bounds for finite element solutions of elliptic boundary value problems
A. Mashaie, E. Hughes and J. Goldak 17

A 2D Chebyshev differential operator for the elastic wave equation
J.M. Carcione 33

Combined distributed and lumped parameters model for transient flow analysis in complex pipe networks
K.P. Ivanov and E.G. Bournaski 47

A 4-node finite shell element for the implementation of general hyperelastic 3D-elasticity at finite strains
P. Betsch, F. Gruttmann and E. Stein 57

Computational acoustics: noise reduction via diffraction by barriers with different geometries
A. Piacentini, M. Invernizzi and L. Pannese 81

A subdomain residual method for a posteriori error estimates of finite element solutions of viscoelastic fluid flows
H. Jin 93

A nonlinear method for the propeller–rudder interaction with the slipstream deformation taken into account
D.-Q. Li 115

Free vibration analysis of multilayered composite plates and shells with the natural approach
J. Zhu 133

Thermoviscoelastic contact analysis with friction by an incremental thermal relaxation procedure
C.-M. Chang and W.-H. Chen 151

On a new time integration method for solving time dependent partial differential equations
W. Zhong, J. Zhu and X.-X. Zhong 163

A computational framework for a class of fully coupled models for elastoplastic damage at finite strains with reference to the linearization aspects
E.A. de Souza Neto and D. Perić 179

Volume 130, Nos. 3–4, 1 April 1996

The numerical determination of the Kelvin impulse of a bubble close to a submerged rigid structure
P.J. Harris 195

Stability of finite element models for distributed-parameter optimization and topology design
C.S. Jog and R.B. Haber 203

The simulation of texture evolution with finite elements over orientation space. I. Development
A. Kumar and P.R. Dawson 227

The simulation of texture evolution with finite elements over orientation space. II. Application to planar crystals
A. Kumar and P.R. Dawson 247

A rational model for the distortional buckling of tapered members
H.R. Ronagh and M.A. Bradford 263

Comparison of several discrete arithmetic schemes for simulating a constrained jet and a lab-scale tangential fired furnace
X.-Y. Zhou, C.-G. Zheng and Y.-Y. Ma 279

An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part I. Formulations and parallel processing
A. Feriani, A. Franchi and F. Genna 289

An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part II. Performance of a first implementation
A. Feriani and F. Genna 299

High-Reynolds number solutions of Navier–Stokes equations using incremental unknowns
O. Goyon 319

An asymptotic variational formulation for dynamic analysis of multilayered anisotropic plates
J.-Q. Tarn 337

A practical algorithm for the efficient computation of eigenvector sensitivities
R.M. Lin, Z. Wang and M.K. Lim 355

Assessment of temporal integration schemes for the sensitivity analysis of frictional contact/impact response of axisymmetric composite structures
L. Karaoğlan and A.K. Noor 369
